

True/False Activity

- **Print** as many copies of the next page as you need to have one true/false sheet for each pair of students in your class.
- **Allow students time** to complete T/F sheet.
- **When answering T/F as a group, instead of yelling the answers, the students will each hold up a “thumbs up” if they think the answer is true, and a “thumbs down” if they think the answer is false.** This gives the teacher a way of assessing how many students are understanding the material and allows all students to participate simultaneously.
- **Review the correct answer** with the class after each question.

True/False

Circle the correct answer for each question.

1	Bacteria cause colds and flus	True	False
2	Antibiotics only work against bacteria	True	False
3	There are four steps to good handwashing.	True	False
