

Clean the playroom

Use the sponges provided in the kit. For very young kids, provide sponges with no water and encourage them to pretend to clean. For slightly older students, provide sponges with a basin with a small amount of water, and for preschool students consider providing a basin with water and plain soap. Instruct students to help keep the environment clean by washing objects or common areas that may have germs – shared toys, tables, chairs, outside toys, doorknobs, sink areas, etc. Discuss the benefits of having a clean environment for children to play.
